

DANA BOWLIN

VP, Information Technology | Technical Program Director

+509-947-3020 | bowlindm@gmail.com | linkedin.com/in/danabowlin | github.com/bowlindm

PROFESSIONAL SUMMARY

Visionary technology executive and technical program leader with 25+ years of progressive IT leadership, combining deep technical expertise with strategic business acumen. Proven record driving large-scale, cross-functional programs across cloud, data platforms, cybersecurity, infrastructure, and product engineering domains - aligning enterprise technology strategy with organizational objectives and delivering measurable ROI. Experienced leading high-volume data and streaming platform programs, managing multi-million dollar IT budgets, SOC2 and compliance programs, Agile/DevOps culture development, AI strategy, and vendor management. Skilled at building and scaling high-performing teams, translating technical trade-offs into clear business value, and communicating naturally across audiences from individual contributors to C-suite leadership.

CORE COMPETENCIES

Strategy & Leadership: IT Strategy & Roadmapping | Digital Transformation | AI Strategy & Adoption | Enterprise Architecture

Operations & Infrastructure: Cloud Infrastructure (AWS) | FinOps & Cost Optimization | Disaster Recovery Planning | Technology Operations

Security & Compliance: Cybersecurity & Risk Management | SOC2 | NIST | Regulatory Compliance | Data Governance

Delivery & Process: Agile / DevOps | Product Management | Software Engineering Leadership | SDLC Governance | Data Platform Programs | Data Lifecycle Management

Business: Budget & Vendor Management | Team Building & Mentorship | Executive Communication | Cross-functional Alignment

Tooling: AWS | GitHub | Jira | Confluence | Datadog | PagerDuty | ServiceNow | Salesforce | NetSuite | Looker | PowerBI | Jamf | M365

PROFESSIONAL EXPERIENCE

Director, Information Technology Feb 2025 - Present

Clēnera (Enlight Renewable Energy subsidiary) Boise, ID

- Serve as the enterprise technology leader for a high-growth utility-scale solar and energy storage developer, overseeing IT strategy, infrastructure, cybersecurity, systems architecture, and enterprise support across a 200-person organization with 1.5+ GW in operation and 15+ GW in development pipeline.
- Define and execute a multi-year technology roadmap aligned with the company's rapid scaling objectives, modernizing the technology landscape to support domestic expansion in the renewable energy sector.
- Lead vendor and contract strategy across the full technology portfolio, rationalizing supplier relationships, negotiating enterprise agreements, and ensuring investments deliver measurable business value and ROI.
- Oversee cybersecurity posture and risk management programs, establishing governance frameworks and security controls that protect critical infrastructure, operational data, and parent company Enlight Renewable Energy's interests.
- Partner directly with executive leadership to translate business priorities into architectural decisions, aligning technology investments with operational goals and positioning IT as a strategic enabler of growth.
- Drive adoption of AI and emerging technologies across the enterprise, identifying high-value use cases that improve operational efficiency and advance data-driven decision-making across project development and asset management; championing data platform investments that enable scalable analytics and reporting.
- Build and develop a high-performing IT team, establishing clear accountability structures, career pathways, and a culture of operational excellence and continuous improvement.

Product and Engineering Leader, Fulfillment Platform 2022 - 2023

Palmetto Remote

- Directed end-to-end product and engineering roadmap for the Fulfillment Platform, delivering 100% operational efficiency gains within 12 months through disciplined sprint planning and outcome-aligned quarterly cycles.
- Secured executive funding to build and staff a corporate accounting systems team, overseeing ERP platforms including NetSuite, Concur, and Stamplicy.
- Established and operationalized SOC2 controls across the organization, leading risk management workstreams encompassing disaster recovery planning, audit cycles, and compliance testing.
- Partnered with executive leadership to define strategic technology investment priorities, translating business goals into actionable engineering roadmaps with clear milestones and success metrics.
- Recruited and developed senior engineering and product talent, building a team capable of owning the full software development lifecycle from ideation through production.
- Drove cloud-first infrastructure decisions, reducing operational overhead and enabling the business to scale fulfillment capacity without proportional cost increases.
- Fostered a cross-functional culture of innovation, establishing engineering rituals and product ceremonies that improved team velocity and stakeholder alignment.

Senior Director, Core Services 2018 - 2022

Warner Bros. Discovery | iStreamPlanet Remote

- Led a 50+ person cross-functional organization spanning product, engineering, infrastructure, security, cloud, IT operations, and candidate experience, supporting mission-critical streaming services for NBC, Hulu, and WarnerMedia.
- Oversaw architecture and delivery of a high-volume enterprise video streaming platform, directing programs across the full data lifecycle - from ingest and pipeline processing through delivery and observability - serving millions of concurrent users across NBC, Hulu, and WarnerMedia.
- Established a comprehensive cybersecurity framework including infrastructure and security automation, substantially strengthening the organization's risk posture and reducing exposure to threats.
- Directed cloud migration initiatives, transitioning workloads from on-premises data centers to cloud platforms while maintaining full production reliability - balancing migration velocity, business continuity, and innovation to keep the business running throughout the transformation.
- Implemented DevSecOps practices across engineering teams, embedding security and quality standards into the CI/CD pipeline and accelerating time-to-production.
- Redefined internal IT and helpdesk operations, elevating employee satisfaction and productivity through modernized service delivery models and tooling.
- Managed multi-million dollar technology budget, optimizing vendor relationships and infrastructure spend while maintaining SLA commitments to enterprise customers.
- Drove data observability and platform reliability programs using Datadog, establishing monitoring, alerting, and incident response practices that reduced mean time to resolution across high-volume streaming data pipelines.

IT Portfolio Manager 2017 - 2018

Pacific Northwest National Laboratory Richland, WA

- Managed a diverse IT portfolio supporting laboratory-wide operational needs, leading governance reviews that resulted in significant increases in government funding allocations.
- Spearheaded a strategic transformation from waterfall to Agile and DevOps delivery methodologies, improving team efficiency and enabling faster response to evolving research and operational demands.
- Conducted comprehensive quarterly portfolio reviews, identifying underperforming investments and reallocating resources to high-priority initiatives aligned with laboratory strategic goals.

- Strengthened IT-business alignment by improving collaboration frameworks and data exchange processes, resulting in measurably better cross-functional relationships and decision-making.
- Established portfolio management standards and governance practices that brought consistency, transparency, and accountability to technology project delivery across the enterprise.

Director, Product Management & Office of the SVP, Cloud Platform 2012 - 2016

CenturyLink Cloud Bellevue, WA

- Served as Director and Lead Product Owner for CenturyLink's Public Cloud Platform, leading a team of product owners and analysts across the full product portfolio.
- Orchestrated the transformation of a 300-person team from waterfall to Agile and DevOps methodologies, serving as operating lead on behalf of the SVP of Platform and CTO.
- Drove monthly Operations and Business Reviews with all Product Directors, surfacing key performance indicators, delivery risks, and strategic priorities to senior leadership.
- Led the Virtual Firewall Services product from ideation through go-live, collaborating with Commercial, Marketing, and Strategic leadership on pricing, positioning, and vendor agreements.
- Managed the Technical Executive Briefing Program, creating high-impact strategic narratives for C-suite and enterprise client audiences.
- Oversaw contractor teams supporting product development, cybersecurity improvements, and feature delivery, maintaining budget discipline and accountability across engagements.
- Partnered with Finance and Procurement to define and negotiate vendor contracts, ensuring alignment with corporate financial objectives.
